

LIVE TRAIN INFORMATION DISPLAY SYSTEM

LTIDS is a self-contained, compact live train information display system. The system, when turned on, launches the LTIDS application. The application connects to our cloud-hosted LTIDS backend and retrieves the latest live train information to be displayed. Install, power it on and it works – it is as simple as that.

LTIDS advantages

- **Compact:** Small, self-contained unit
- **Easy installation:** No need for cables. Mount the unit, connect to electrical power and turn it on.
- **Autonomous:** Turn it on and it works
- **Easy operation:** Manage platform information on the web or on mobile phone. Ideal for Railway staff on the move.
- **Custom display:** Choose from a list of display styles

- **Easy maintenance:** Hassle-free, online maintenance
- **State-of-the-art technology:** Latest hardware and software technology

Components of LTIDS

- **Display Unit:** LED TV, a mini-PC, localised Wi-Fi hotspot using a 4G/3G dongle and a voltage stabiliser
- **Platform Manager:** A web-based platform manager application for railway staff to enter platform information
- **Backend:** A cloud-hosted backend that retrieves the latest train running information from NTES
